Nutrition21 LLC's (Purchase, NY) patented ingredient Nitrosigine is now featured in a recent release from Alani Nu, called Pump-Stim Free. Nitrosigine is a complex of bonded arginine silicate stabilized with inositol that is engineered to significantly boost nitric oxide levels. Pump-Stim Free is a stimulant-free pre-workout supplement designed to increase longevity of exercise and boost mental focus.

“At Alani Nu, our goal is to provide high-quality products that help our customers feel and perform at their best,” said Katy Hearn, founder of Alani Nu, in a press release. “Pump-Stim Free is more than just another pre-workout, it is what our customers have asked us for, a high-

quality product that provides them with the boost needed to get the most out of their active lifestyle and power through the moments that matter most.”

“In developing this new pre-workout, the Alani Nu Team placed their focus on using a combination of efficacious ingredients to deliver crucial benefits without using stimulants. We are excited that Nitrosigine not only met their stringent specifications, but also that it was included for its powerful nitric oxide boosting properties,” said Nutrition21 vice president of sales, Todd Spear, in a press release. “Consumers looking to improve their pre-workout routine should look for Pump-Stim Free, as well as the Nitrosigine trademark or logo on the products they are using to help support their overall fitness goals.”
